Update !

Web3D 2015 Annual Conference

- Sponsored by ACM SIGGRAPH
- in Cooperation with Web3D Consortium and Eurographics
- 20th Annual held in Heraklion, Crete June 2015
 - See papers @ siggraph.org and acm dl!
- Next year in Anaheim co-located with SIGGRAPH

Medical and Volume Visualization

- **X3D highlights**
- **X3DOM (X3D + HTML5 + WebGL)**

Consortium

- ***Content*** is King !
 - Author and deploy interactive 3D assets and environments with confidence, royalty-free
 - Required:
Portability, Interoperability, Durability
- Not-for-profit, member-driven organization
- International community of creators, developers, and users building evolving over 20 years of graphics and web technologies
- Open Standards ratification (ISO/IEC)

Medical and Volume Visualization

The Web3D Consortium Medical Working Group is chartered to advance open 3D communication in the healthcare enterprise

- BOFs, workshops, and progress since 2008 when TATRC sparked the flame with ISO/IEC Volume Component in X3D

PUBLIC WIKI:

http://www.web3d.org/wiki/index.php/X3D_Medical

Web3D.org Medical Working Group

- ***Reproducible*** rendering and presentations for stakeholders throughout the healthcare enterprise (and at home):
 - Structured and interactive virtual environment display of 2D & 3D medical imaging objects and time series
 - Platform-independent, royalty-free technology to enable vendor innovation
 - Hand-held and immersive displays
 - Input devices
 - Lossless with provenance metadata and ontology references
 - Web-aware

Interactive 3D Data in Medicine

Many cross-platform applications demonstrated with the open graphics standard:

- Bioinformatics
- Molecular Dynamics
- Microscopy
- 3D Printing
- Imaging
- ...

Imaging & Scanning

Tackling the challenges of:

- Cross-platform volume rendering (from PACS to phone)
- Patient-specific, holistic medicine for better outcomes
- Metadata for health informatics

Volume Presentation

Many techniques:

- Volume rendering
 - 3DSplatting, ray tracing, pixelshaders
 - Established CPU and GPU algorithms
- Surfaces – actual meshes
- Segments – identifying voxels as groups
- ISOSurfaces – rendered at a threshold

5

ti

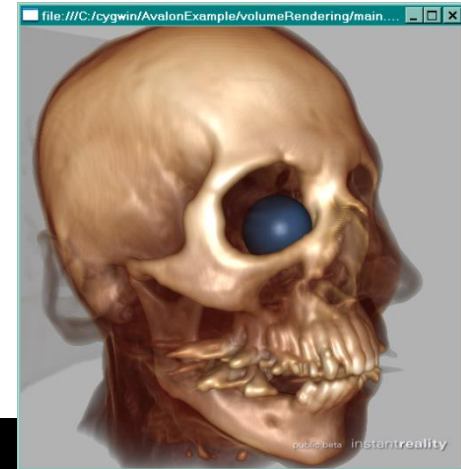

Volumes: Lots of Tools & Domains

- VTK-ITK, ITK-Snap
- Seg3D
- Slicer
- 3DVisualizer
- Voreen
- Osirix

Reproducibility

Extensible 3D (X3D): A robust, cross-platform scene graph for Volume Rendering + Informatics by considering:

- *Representation*
- *Implementation*
- *Interaction*
- *Integration*

ISO Standards

Cross-platform Scene Graph representations with multiple encodings and APIs:

- **Extensible 3D (X3D)**
 - Rich 3D content model including support for: DCC, CAD/BIM, Geospatial, Volume Vis, HTML5/WebGL (X3DOM)...
- **Humanoid Animation (H-Anim)**
- **Virtual Reality Modeling Language (VRML)**

ISO/IEC X3D 3.3 Volume Rendering

- Composable Render Styles covering the state of the art
 - Formalizes parameters and transfer functions for the *Greatest Common Denominator* Of 3D rendering & blending:

- [BoundaryEnhancementVolumeStyle](#)
- [CartoonVolumeStyle](#)
- [ComposedVolumeStyle](#)
- [EdgeEnhancementVolumeStyle](#)
- [OpacityMapVolumeStyle](#)
- [ProjectionVolumeStyle](#)
- [ShadedVolumeStyle](#)
- [SilhouetteEnhancementVolumeStyle](#)
- [ToneMappedVolumeStyle](#)

Opacity Map

Silhouette

Cartoon

- Assign different RenderStyles to different segments, blend two volumes:
 - [BlendedVolumeStyle](#)
 - [SegmentedVolumeData](#)
 - [IsoSurfaceVolumeData](#)

- Clipping Planes are already specified in X3D 3.2 Rendering Component!

Example Volume Rendering Styles

(Head MRI, XML encoding)

```
<Transform DEF='backdrop' >  
  <VolumeData dimensions='.75 1 1' >  
    <ImageTexture3D containerField="voxel"  
    <OpacityMapVolumeStyle />  
  </VolumeData>  
</Transform>
```

Example Volume Rendering Styles

(Head MRI, optic segment)

```
<ISOSurfaceVolumeData surfaceValues='.15' dimensions='.75 1 1' >  
  <ImageTexture3D containerField="voxels" url=""/Segments/masked-optic.nrrd"/>  
  <CartoonVolumeStyle />  
</ISOSurfaceVolumeData>
```

(Head MRI, cerebrum segment)

```
<VolumeData dimensions='.75 1 1' >  
  <ImageTexture3D containerField="voxels" url=""/Segments/masked-  
  cerebrum.nrrd"/>  
  <ComposedVolumeStyle>  
    <CartoonVolumeStyle />  
    <EdgeEnhancementVolumeStyle gradientThreshold='.8' edgeColor='0 0 .5' />  
  </ComposedVolumeStyle>  
</VolumeData>
```

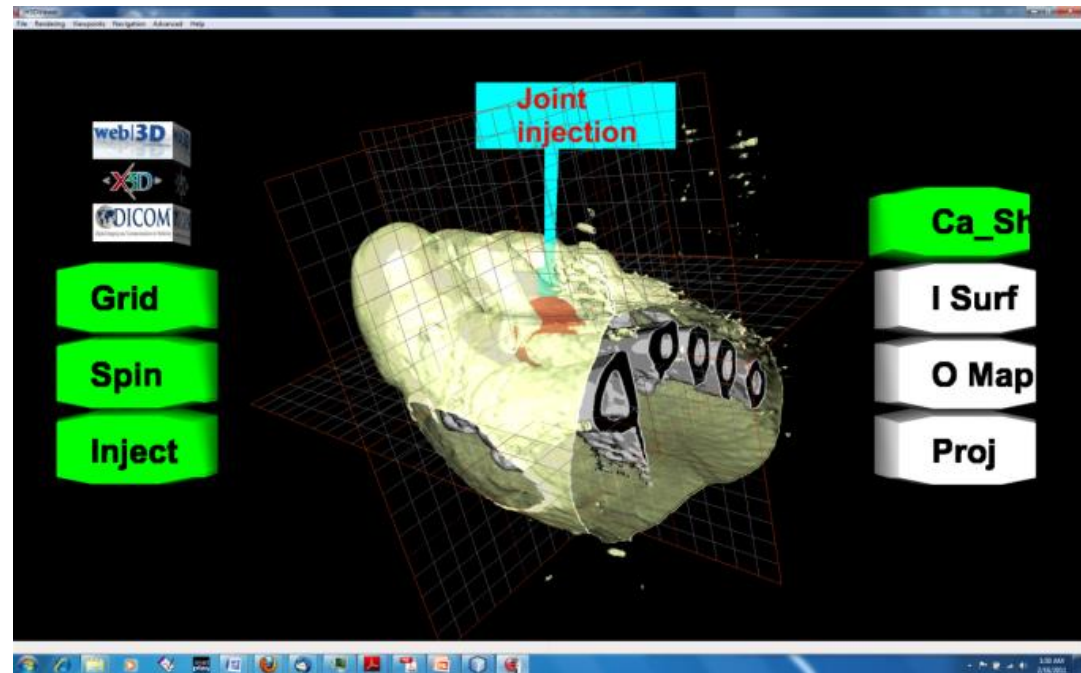

X3D Medical Interchange Profile

Minimal X3D node set (footprint) to meet DICOM requirements:

Includes polygon, line and point rendering; metadata on any node

- Core
- Time
- Networking
- Grouping
- Rendering
- Shape

- Texturing3D
- Volume rendering

X3DOM.org = HTML5 + WebGL + X3D

The screenshot shows the X3DOM.org website in a browser window. The page features a dark blue header with the text "x3dom Instant 3D the HTML way!". Below the header is a navigation menu with links: home, about, showcases, examples, browser support, documentation, get it, profile, get involved, and legals. A diagonal banner on the right side says "Fork me on GitHub".

The main content area is divided into two columns. The left column contains a code editor showing X3D XML code. The right column features a news article titled "NIST/DLMF uses X3DOM" dated March 24th, 2014. The article text reads: "The American National Institute of Standards and Technology (NIST) has just made public an X3DOM version of the Digital Library of Mathematical Functions (DLMF). VRML content has been successfully migrated to X3DOM, so that every WebGL-capable browser can now be used to inspect high-quality visualizations of mathematical functions from the DLMF."

Below the article is a 3D visualization of a mathematical function, labeled "Figure 21.4.1 (See in context)". The visualization shows a colorful surface plot with a control panel on the right. The control panel includes sections for "Colormap" (Modulus, Phase, Quadrant), "Viewpoint" (with navigation icons), "Scale Figure" (with sliders for x, y, and z axes), and "Cutting Control" (with x, y, z axes and a Clear button).

At the bottom of the browser window, the Windows taskbar is visible, showing the Start button and several application icons. The system tray in the bottom right corner displays the time as 11:31 PM and the date as 8/11/2014.

Supplemental Material

- Web3D 2013 Tutorial is online (excerpts below)
- See [web3d.org](http://www.web3d.org) Medical WG Public Wiki

http://www.web3d.org/wiki/index.php/X3D_Medical

Rendering a Volume: VolumeData Node

- Most basic volume rendering node in X3D
- Contains the voxels to be rendered and render styles to do so

```
<VolumeData dimensions='1.28 1.28 1.0' >  
  <!-- VolumeRenderStyle node here (optional) -->  
  <ImageTexture3D containerField='voxels' url=' "path_to_dataset" '/>  
</VolumeData>
```

Opacity Map VolumeStyle

- The default style, the basis for all enhancement styles
- Has only one field, “transferFunction”
 - Two or three dimensional texture
 - One to four components

```
<OpacityMapVolumeStyle>
```

```
  <ImageTexture3D containerField='transferFunction' url=""engineTransferSchnitt.png" />
```

```
</OpacityMapVolumeStyle>
```

Default

With Transfer Function

Projection VolumeStyle

- A raycasting technique
- Depending on the value of the “type” field, returns either the MAX, MIN, or AVERAGE of the voxel values along the ray
- If “intensityThreshold” is specified, returns the first local min/max above/below the threshold

```
<ProjectionVolumeStyle type='MAX' enabled='true' intensityThreshold='0'  
  containerField='renderStyle'/>
```

Per-Voxel VolumeStyles

- View-Dependent
 - Opacity Map (default)
 - Enhancement Styles
 - Boundary, Edge, Silhouette
 - Cartoon
- Lighting-Dependent
 - Tone Map
 - Shaded

Opacity Map

Edge Enhanced

Cartoon

Shaded

Tone Map

Combining Styles: ComposedVolumeStyle

```
<ComposedVolumeStyle enabled='true' ordered='false' containerField='renderStyle'>  
  <SilhouetteEnhancementVolumeStyle silhouetteBoundaryOpacity='1'  
    silhouetteRetainedOpacity='.1' silhouetteSharpness='10' enabled='true'  
    containerField='renderStyle'/>  
  <EdgeEnhancementVolumeStyle edgeColor='.5 0 0' gradientThreshold='.8'  
    enabled='true' containerField='renderStyle'/>  
</ComposedVolumeStyle>
```

Style1 (Edge Enhance)

+

Style2 (Silhouette)

Composed Styles

Rendering a Volume: IsoSurfaceVolumeData

- Similar to the basic VolumeData node, but renders a surface across voxel gradients

```
<IsoSurfaceVolumeData dimensions='1.28 1.28 1.28' surfaceValues='.15'  
  contourStepSize='0' surfaceTolerance='0' containerField='children'  
    <CartoonVolumeStyle colorSteps='32' />  
    <ImageTexture3D containerField='voxels' url=" "skull.nrrd" />  
</IsoSurfaceVolumeData>
```

Boundary Enhancement Style

- Modifies voxels based on how quickly their surface normals are changing:

```
<BoundaryEnhancementVolumeStyle boundaryOpacity='0.9' opacityFactor='0.9'  
retainedOpacity='0.2'>
```

Edge Enhancement

- Voxels are colored based on how close to perpendicular their normal are to the view, outside of a threshold.
- Useful for surface features, not internal features.

```
<EdgeEnhancementVolumeStyle enabled='true' edgeColor='1 0 0 1'  
gradientThreshold='0.4' containerField='renderStyle'/>
```

Default

Edge Enhanced

Silhouette Enhancement

- Modifies the color and opacity of voxels based on their normal values
- Unlike edge enhancement, it can be used to reveal internal features

```
<SilhouetteEnhancementVolumeStyle silhouetteBoundaryOpacity='1'  
silhouetteRetainedOpacity='.5' silhouetteSharpness='10' enabled='true'  
containerField='renderStyle'/>
```

Cartoon VolumeStyle

- Renders voxels based on the normal value as one of a specified number of color steps between an orthogonal (plane surface) color and parallel color:

```
<CartoonVolumeStyle enabled='true' colorSteps='4' orthogonalColor='1 1 1 1'  
parallelColor='0 0 0 1' containerField='renderStyle'/>
```

Shaded VolumeStyle

- Voxel appearance is controlled by a material node, similar to normal geometry (relative to light source)
- Can be computationally expensive

```
<ShadedVolumeStyle lighting='true' shadows='true' enabled='true'  
  phaseFunction='Henyeey-Greenstein' containerField='renderStyle'  
    <Material ambientIntensity='0.8' diffuseColor='0.5 1' shininess='0.08'  
      specularColor='1 1 1' />  
</ShadedVolumeStyle>
```

Default

Shaded

Tone Mapped VolumeStyle

- Uses the Gooch shading model to color voxels based on their orientations relative to a light source, between a warm (facing light) and cool (facing away) color

```
<ToneMappedVolumeStyle warmColor='0 0 1 0' coolColor='1 1 0 0' />
```

Default

Tone Mapped
